The following is an examiner's statement of reasons for allowance:

The present invention relates to a process for the catalytic partial oxidation of liquid fuels, selected from tow quality gas oils with a high content of aromatics and sulfur (by low quality gas oils with a high content of aromatics and sulfur means gas oils, such as light cycle oil and heavy cycle oil) together with gaseous fuels selected from refinery gases, natural gas, and/or LPG. Feely et al make no mention of using a feed composition that is liquid feed having high aromatic and sulfur content. This is because it was known in the art that the use of such high sulfur content hydrocarbons caused deactivation of the kinds of catalysts being used by Feely et al.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
